

Metashield® Protector for SharePoint

Prevent confidential data leaks from your SharePoint environment by automatically eliminating document metadata

BENEFITS

Quick and easy implementation

Straightforward installation of the service with custom support and consulting if needed.

Service aligned with corporate security policies

Metadata security processes customizable to suit any website, on controls information leakage via multiple file types.

Compliance with regulatory frameworks

Improves compliance with regulatory frameworks such as PCI-DSS, HIPAA, GLBA, SOX, etc.

Reporting and monitoring

Integrated reports allow you to review in detail the quantity and type of information likely to exit the organization at any time. A registration service allows you to constantly and continuously monitor all cleaning processes.

Continuous detection service

Once configured, the cleaning service initiates a continuous leak detection process.

Update notification service

Automatic notifications of service updates controlled by the administrator.

ElevenPaths services included

Support for installation and configuration from ElevenPaths' Support Center is included in the service.

Protect your Microsoft SharePoint based document management systems

Every day organizations publish more and more content on the Internet, leading to one of the main unaddressed vulnerabilities faced today: leakage of sensitive information through document metadata, hidden data, and lost information. The result can be devastating, especially if confidential data ends up in the wrong hands. Increased risk of damage to corporate reputation, fines, business losses, and increased exposure to attack are just a few of the problems that can result.

MetaShield® Protector for SharePoint provides absolute protection of document environments that use SharePoint technologies, virtually eliminating the security risk associated with the leakage of confidential information through document metadata, hidden data and lost information.

What distinguishes MetaShield® Protector for SharePoint from other solutions?

MetaShield® Protector for SharePoint extends the security functionalities available for environments of standalone servers or farm topologies. This easy-to-deploy solution implements a continuous monitoring and cleaning process, that will prevent security breaches that might otherwise result in information loss through document metadata, hidden data and lost information.

ElevenPaths' technology was designed and developed by information security and document management experts to provide you and your organization with the highest levels of security in SharePoint web environments.

It provides administrators with a simple, centralized graphical tool that protects the information stored on servers based on a defined policy. **MetaShield® Protector for SharePoint** allows you to choose the type of information that will be processed for cleaning, in alignment with corporate objectives.

Metashield® Protector for SharePoint

- Automatic elimination of metadata on web environments
- Constant protection against information leaks

Technical specifications

Environment

- Native server module for Microsoft Sharepoint implementations on standalone servers or SharePoint farm topologies
- Support for any SharePoint solution (SharePoint Foundation, Search Server, Fast Search Server, SharePoint Server, etc.)
- Integrates into reverse proxy environments and alternative access assignments
- Centralized statistics database

Statistics and monitoring

- Integrated statistical reports
 - Average cleaning time per file type
 - Total files processed
 - Total downloaded files
- Monitoring of document cleanup

Configuration settings

- Implementation at web application level
- Customizable file extension settings

Security

- Prevention of data leaks through filtering and elimination of document metadata, lost data and hidden information
- Control of user defined custom metadata fields
- Compatibility with SSL certificates (private, multidomain or wildcard)
- Improved compliance with PCI DSS, HIPAA, and other regulatory frameworks and legislation
- Elimination of tactical information leakage through metadata for improved protection against targeted attacks and Advanced Persistent Threats
- Automatic update notifications, and download of updates on demand

Minimum requirements

- Windows Server 2008 or above (any edition).
 - Internet Information Services 7 or above
- .Net Framework 3.5
- SQL Server Express or above
- 1024 Mb Ram
- 30 Mb of disk space

Office documents

Microsoft Office Files	*.ppt, *.doc, *.xls, *.pptx, *.docx, *.xlsx, etc.
Open Office + Libre Office Files	*.odg, *.odt, *.odp, *.ods
Star Office Files	*.sxw
iWorks Files	*.pages, *.key, *.numbers
Digital/Image Files	*.jpg, *.pdf

Get the solution that best suits your needs

Do you need a tool to perform forensic analysis? Do you want to protect your files/web servers against sensitive information leaks? Or do you need to clean the metadata from your desktop systems? Contract the solution that best suits the needs of your enterprise.

Prevent metadata information leaks

Files posted on Internet will meet the corporate metadata policy, while the original documents will remain unaltered and document copies delivered to customers will not contain any type of confidential information.

Protect your brand

Protect your brand's reputation and prevent the loss of customer confidence. An organization is as good as its reputation or corporate image, which can be damaged or destroyed in seconds through security breaches.
